Appendix 1

1 Introduction

- 1.1 The making descriptors are applicable to all candidates' work.

The descriptors have been developed with reference to the FHEQ credit level descriptors

The appropriate descriptors should be made available to candidates in course documentation.

- 1.2 The descriptors are generic and applicable to a broad range of academic disciplines.

They aim to provide: a reference for articulating the standards of students' work with the use of clear, consistent statements to describe candidate performance and what a candidate needs to do to reach a particular grade/mark band; a framework to indicate how a student can improve their performance, and to facilitate feedback to candidates.

2 Use of the grading descriptors

- 2.1 Candidates' work should be assessed against published assessment criteria and marked/graded using the generic descriptors, including where work is marked as pass or fail. The descriptors describe key features and general characteristics of assessed work associated with each grade and where necessary they can be adapted (refer 2.3).

For candidates to understand what they are being assessed on, clear assessment criteria and grading descriptors are needed. It is also important to ensure that the learning outcomes of the assessment are integrated with the grading descriptors.

- 2.2 The descriptors are inter-related and should not be interpreted as a series of mutually exclusive categories. Candidates' work may demonstrate some characteristics of, for example, the pass, merit and distinction categories and the final mark/grade for the work should always be matter of academic judgement. The emphasis given to various aspects of the descriptors will vary depending on the nature of the assessment task and discipline area.

Examiners/Assessors should use the whole of the marking scale, interpreting the descriptors in the context of their discipline.

- 2.3 The descriptors may be used as they are or contextualised in the design of assessment specific criteria in the context of a particular discipline, mode of assessment and in the development of criteria. These should clearly link back to the generic descriptors.

Where the design of a module and its associated assessment task(s)/ brief(s) mean that it is not appropriate to grade candidates' work using these descriptors, for example multiple choice examinations or competency-based/observation type tasks, details of how the task(s) will be assessed should be clearly stated in the relevant unit outline.

Distinction	<p>A very good or excellent response to the task</p> <p>The work demonstrates most or all of the following characteristics in relation to those expected at the given level of study within the discipline:</p>
<p>All learning outcomes/ assessment criteria have been achieved to a high standard and many at an exceptionally high level</p>	<ul style="list-style-type: none"> • In-depth understanding, exploration, insight and/or research • All specifications for the assessment task, including word limit/time limit where appropriate, have been adhered to • The organisation, structure and standard of presentation of the work, including referencing where appropriate, are excellent throughout. • The work has been approached and/or executed/performed in an original way • Insightful contextualisation, including relevant theory/ literature/ artefacts/performance • Evidence of high to very high quality analysis, synthesis, evaluation and critical appraisal • Demonstrates high levels of initiative, personal responsibility, decision-making and achievement
Merit	<p>A good response to the task</p> <p>The work demonstrates most or all of the following characteristics in relation to those expected at the given level of study within the discipline:</p>
